```java
public class B_JDKProxy {

    @Test
    public void fun01(){
        AccountDao accountDao = new AccountDaoImpl();

        AccountDao proxyDao =  (AccountDao)
Proxy.newProxyInstance(accountDao.getClass().getClassLoader(),
accountDao.getClass().getInterfaces(), new InvocationHandler() {
            @Override
            public Object invoke(Object proxy, Method method, Object[] args)
throws Throwable {
                if("save".equals(method.getName())){
                    System.out.println("权限校验...");
                    return method.invoke(accountDao,args);
                }
                return method.invoke(accountDao, args);
            }
        });
        proxyDao.save();
    }
}
```
